

Food Hardship in America 2010

Households with and without Children

August 2011

In this report the Food Research and Action Center (FRAC) looks at rates of food hardship (rates of households answering "yes" over the course of a year to the question whether there were times over the past year "when you did not have enough money to buy food that you or your family needed") for households without children and households with children. We look at those rates by state, by Metropolitan Statistical Area, and by Congressional District.

Among the findings of deep and widespread food hardship are the following:

- In 195 Congressional Districts, at least one in four households with children answered "yes" to the question.
- In 312 Congressional Districts, at least one in five households with children answered this
 question "yes."
- In 40 of America's 100 largest Metropolitan Statistical Areas (MSAs), more than one in four households with children answered "yes."
- In 21 states and the District of Columbia the rate for households with children answering "yes" exceeded 25 percent.

This report is the fifth in a series from FRAC analyzing data derived from answers given by hundreds of thousands of households to the question about their inability to purchase enough food posed by the Gallup organization as part of the Gallup-Healthways Well-Being Index. The four previous reports are described briefly at the back of this report.

In one of those prior reports, FRAC released earlier this year an analysis of national, regional, state, MSA and Congressional District food hardship rates through 2010. That report did not look separately, however, at rates for households with children compared to households without children. This report does.

The specific food question that Gallup has been posing is very similar to one of the questions asked by the federal government in its annual survey of Americans' food security. Gallup asks: "Have there been times in the past twelve months when you did not have enough money to buy food that your or your family needed?" FRAC counts "yes" answers as evidencing "food hardship." In the annual Census Bureau survey for the federal government (analyzed each year by the U.S. Department of Agriculture), households are

asked to say whether "The food that we bought just didn't last and we didn't have money to get more," and then "Was that often, sometimes, or never true for you in the last 12 months?" This is one of a series of questions asked of households by the Census Bureau to measure what the government calls "food insecurity."

The similarity between the Gallup question and the particular Census Bureau/USDA question quoted in the prior paragraph provides a basis for concluding that the two questions are measuring food insecurity in quite similar ways. And while the multiple Census Bureau/USDA questions allow for a more nuanced view of the depth of food insecurity and the particularity of families' struggles, the very large Gallup-Healthways sample allows a closer, more localized, and more timely look at the phenomenon.

To avoid confusion with the Census Bureau/USDA study that produces "food insecurity" numbers, FRAC calls its results from the Gallup-Healthways survey "food hardship," but the concepts are comparable.

In order to look at food hardship among both households *without* children and households *with* children,¹ we use multiyear averages to achieve adequate sample sizes.

Rates among households *without* children are themselves far too high. In all but one state, for example, the rate is above 10 percent; in 27 states it is 15 percent or higher; and in five states it is 20 percent or higher.

But, not surprisingly, given relative national poverty and hunger rates, the situation for households *with* children is far worse. Nationally in 2010 the food hardship rate for households without children was 14.9 percent, while it was 23.4 percent for families with children. Because of that disparity, in this report FRAC has given more emphasis to the households with children data, and has ranked states, MSAs and Congressional Districts on this basis.² The following sections summarize some of the key data on households with children.

About FRAC

The Food Research and Action Center (FRAC) is the leading national organization working for more effective public and private policies to eradicate domestic hunger and undernutrition.

For more information about FRAC, or to sign up for FRAC's Weekly News Digest, visit www.frac.org.

Acknowledgements

This report was prepared by Rachel Cooper, Michael Burke, Katie Vinopal, Julia Druhan and Jennifer Adach.

¹ Gallup asks if there are children under the age of 18 living in the household.

² For state, MSA and Congressional District rankings based on all households (both with and without children) combined, see FRAC's March report on food hardship http://frac.org/wp-content/uploads/2011/03/food_hardship_report_mar2011.pdf.

Food Hardship in Households with Children in the States

In 2009-2010:

- 21 states and the District of Columbia had at least one in four households with children (25 percent or more) struggling with food hardship.
- 45 states and the District of Columbia had at least one in five households with children (20 percent or more) struggling with food hardship.

	Number of States		
Food Hardship Rate	Households Without Children	Households With Children	
30% or higher	0	4	
20-29.9%	5	41	
15-19.9%	22	6	
10-14.9%	23	0	
1-9.9%	1	0	

Even in the state with the lowest rate, North Dakota, fully 15.3 percent of households with children suffered from food hardship. What this means is that every state has an extraordinarily serious problem of food insecurity in households with children. Even in North Dakota, more than one in seven such households were affected.

Except for the District of Columbia, the 18 worst states were all in the Southeast, Southwest and West (using USDA Food and Nutrition Service definitions to place states in regions). (Fifteen are in the chart below; the next three are Georgia, Oregon, and California.)

The chart in this section shows the 15 worst states on the households with children measure. Data on households with and households without children for all 50 states and the District of Columbia are in the appendix.

15 States with the Highest Rates of Food Hardship for Households with Children, 2009-2010

State	Rate	Rank
D.C.	37.4	1
Mississippi	32.5	2
Alabama	32.0	3
Florida	30.0	4
Arkansas	29.2	5

North Carolina	28.5	11
New Mexico	28.3	12
South Carolina	27.9	13
Texas	27.9	13
Oklahoma	27.6	15

Food Hardship in Households with Children in Metropolitan Areas

The Gallup-Healthways survey also gives an in-depth look at food hardship for different types of households in the nation's largest urban areas – Metropolitan Statistical Areas (MSAs). MSAs are Census Bureau-defined areas that include central cities plus the surrounding counties with strong economic and social ties to the central cities. FRAC looked at food hardship data over the 2009-2010 period in the 100 MSAs with the largest number of respondents to the Gallup-Healthways survey to determine the rates for households with children.

Of those 100 largest MSAs, 40 had at least one in four households with children (25 percent or more) answering that they did not have enough money to buy needed food at times in the last 12 months, and every one of the 100 largest MSAs had 15 percent or more of such households affirmatively answering this question.

Despite the common impression that urban poverty and economic hardship are

clustered and most severe in the Northeast and Midwest, most of the MSAs with the highest rates of food hardship among households with children were in the Southeast and Southwest, plus California. Of the 25 MSAs with the worst rates, 5 were in Florida, 4 were in California, 2 in Arizona, 2 in North Carolina, 2 in Ohio and 2 in Tennessee.

The chart in this section shows the 25 worst MSAs. Data for all 100 MSAs are in the appendix.

Food Hardship in Households with Children in Congressional Districts

The Gallup-Healthways survey also provides a large enough sample to enable the measurement of food hardship among households with children and without children in every one of America's 436 Congressional Districts (including the District of Columbia). To obtain a large enough sample for these groups at the Congressional District level, FRAC used 2008-2010 data.

The staggering results show how widespread is the struggle to afford food for families with children. *368* Congressional Districts have at least *one in six households with children* struggling with food hardship. The districts are: from all geographic areas of the nation; rural, urban and suburban; represented by Republicans and Democrats. They include districts represented by leaders, key committee chairs and ranking minority members, and other prominent

Food Hardship Rate	Number of Congr Households

195 Congressional Districts had a food hardship rate for households with children of 25 percent or more – at least one in four households with children answered the Gallup-Healthways question "yes." Only three districts in the country reported a rate lower than 10 percent.

In other words, virtually every Congressional District in the country had more than one in ten respondents in households with children reporting food hardship. The median Congressional District had a rate of 24 percent.

Of the 45 districts with the worst rates, six were in Texas, six were in California, five were in Florida, three were in Alabama, and three were in Mississippi. (See the chart above of the 45 districts with the highest rates.)

The appendix to this report includes two separate lists, each with the food hardship rate for households with children and households without children in every Congressional District. One list is designed to make it easy for readers to find rates in specific districts of interest to them: it is organized alphabetically by state and, within the state, by the Congressional District number. That list gives the rates for each district and also shows where each district ranks nationally based on the households with children rate, with 1 being the highest (worst) food hardship rate and 436 being the lowest. The second list is organized by rank among the 436 districts on food hardship among households with children, with 1 being the highest rate and 436 being the lowest.

Ranking 350th or even 400th on the list, however, should not be a point of pride. After all, the 416th district in the country has one in eight households with children suffering food hardship. What this list shows is that food hardship is a problem in every corner of America, and should be a concern for every Member of Congress. In the end, the nation's childhood food insecurity problem doesn't boil down to the 312 districts with rates of 20 percent or worse, or the half of all districts worse than the median of 24 percent. It boils down to the fact that not one Congressional District in this extraordinarily wealthy nation is free from food hardship, and that many of the constituents for every member of Congress told Gallup that there were "times in the past twelve months when [they] did not have enough money to buy food that [they or their family] needed." This is a national problem demanding aggressive steps toward a solution.

Summary of Prior Food Hardship Reports

FRAC's series, "Food Hardship: A Closer Look at Hunger," analyzes survey data that were collected by Gallup and provided to FRAC. Earlier reports in the series include:

- Food Hardship: A Closer Look at Hunger <u>Data for the Nation, States, 100 MSAs, and Every Congressional District</u> (January 2010) First in the series, this analysis contains food hardship data for 2008 and 2009 for the <u>nation, every state, 100 of the largest MSAs, and every congressional district</u>. It also contains an examination of food hardship rates among households with and without children on the national and state level, as well as 50 of the largest MSAs.
 - www.frac.org/newsite/wp-content/uploads/2010/01/food_hardship_report_2010.pdf
- Food Hardship: A Closer Look at Hunger <u>Data for the Nation through September 2010</u> (November 2010) This analysis contains <u>national</u> food hardship data and trends for the first nine months of 2010 (January through September). www.frac.org/wp-content/uploads/2010/11/foodhardship_nation2010.pdf
- Food Hardship: A Closer Look at Hunger <u>State Data through June 2010</u> (December 2010) This particular analysis examines food hardship rates by <u>state</u> in the first half of 2010. www.frac.org/wp-content/uploads/2010/12/FoodHardship_State2010.pdf
- Food Hardship in America <u>Data for the Nation, States, 100 MSAs, and Every Congressional District</u> (March 2011) Adding regional data, this analysis is the second full review of food hardship data, updated through 2010. It examines food hardship rates for the <u>nation, regions, states, 100 of the country's largest MSAs, and every congressional district.</u>
 - www.frac.org/wp-content/uploads/2011/03/food_hardship_report_mar2011.pdf

Methodology

Results are based on telephone (landline or cellular) interviews for 2008 through 2010 with randomly sampled adults, age 18 or older in all 50 states and the District of Columbia. Total sample sizes in 2008, 2009, and 2010 were 355,344, 353,849, and 352,840, respectively. Margins of error were calculated using 90% confidence intervals.

At the national level in 2010 in households without children (n=256,646) and households with children (95,120), the margin of error is less than ± 1 percentage point.

At the state level for 2009 through 2010 in households without children (n=507,858; range: 1,015-50,642) margins of error are within ± 2 percentage points and are within ± 3.2 percentage points for households with children (n=191,303; range: 260-21,325) (with one exception: the District of Columbia has a margin of error of ± 5 percentage points for households with children).

At the MSA level for 2009 through 2010 in households without children (n=293,910; range: 823-22,089), margins of error are within ± 2.2 percentage points and are within ± 5 percentage points for households with children (n=118,011; range: 224-9,114). At the congressional district level, for 2008 through 2010 in households without children (n=633,989; range: 493-3,664) margins of error are within ± 3.3 percentage points in households without children and within ± 5.5 percentage points in households with children (n=245,329; range: 208-1,177).

This report presents prevalence estimates for food hardship at the national level in households without children and with children in 2010 and is directly comparable to FRAC's report of food hardship at the national level in households without and with children in 2008 and 2009. Food hardship estimates in this report in households without and with children at the state and MSA levels are not directly comparable to FRAC's previous estimates because of overlap in the sampled years. Food hardship estimates in this report are for 2009 through 2010 for states and MSAs and for 2008 through 2010 for congressional districts only. The estimates in this report should not be interpreted as change from FRAC's estimates in 2008 through 2009 for states and MSAs.

Data is weighted to minimize nonresponse bias, based on known census figures for age, race, sex, and education. The average design effect is 1.6. In addition to sampling error, question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of public opinion polls. Tests of significance were conducted with unweighted observations. All differences between households without and with children were significant at p=0.05 unless otherwise noted.

Food Hardship in 2009-2010 by State for Households with and without Children, Ranked by Hardship among Households with Children
