

NJ COUNTS

TRI-COUNTY CoC
Point-in-Time Count of the Homeless
January 25, 2022

Acknowledgements

The New Jersey Housing and Mortgage Finance Agency and its partner in the annual Point in Time Count, Monarch Housing Associates, would like to thank all Point-In-Time Coordinators, homeless service providers, agencies, and volunteers who participated in NJ Counts 2022, with specific recognition of Bergen County, which graciously provided a Spanish translation of the 2022 paper survey tool.

A special acknowledgement is given to all the respondents, who were willing to share personal information about themselves and their households' experiences in order to help our communities better understand and assist the homeless.

I. Introduction

NJ Counts 2022

NJ Counts 2022, New Jersey's annual Point-In-Time (PIT) Count of the Homeless, provides a statewide snapshot of households experiencing homelessness in our communities; where they find shelter, what their needs are, and what factors contribute to making them homeless. The 2022 Count reveals important demographic and other information about families and individuals experiencing homelessness on the night of Tuesday, January 25th, 2022. These findings help stakeholders understand how to better allocate housing resources and services to prevent and end homelessness.

The 2022 Count was greatly affected by the COVID-19 pandemic. Homeless service systems and planning bodies have had to substantially alter the way they have traditionally operated for the health and safety of their clients and staff. Across NJ, communities had to alter their methodology for interviewing persons experiencing homelessness during the PIT count. Many communities have traditionally relied on Project Homeless Connect (PHC) events, along with street outreach efforts, to engage with persons experiencing homelessness, especially those experiencing unsheltered homelessness, in their communities. PHC events traditionally have had several service providers available to engage and enroll clients in programs, distribute donated gift cards, clothing, food, and other essentials, as well as provide access to services such as haircuts and showers in a one-stop service fair model. Due to the COVID-19 pandemic, many communities altered or canceled these events. Previous PIT counts in the past have also relied heavily on volunteers to assist in completing interviews with persons experiencing homelessness. Communities altered their practices in 2022 to rely less on volunteers and more heavily on homeless service agency and outreach staff. Methodologies were altered so that more strategic outreach could be done while relying on fewer volunteers to conduct surveys.

This Report

The structure of this report is intended to provide not only an overall snapshot of the homeless population counted in the Point-In-Time, but also to focus attention on the homeless subpopulations that are the most in need, and those that represent federal funding priorities set forth by the U.S. Department of Housing and Urban Development (HUD).

The findings in this report are presented in the following sections:

1. Racial Disparities among the Total Homeless Population;
2. Total homeless population;
3. Subpopulations
 - a. Unsheltered
 - b. Chronically Homeless
 - c. Veterans
 - d. Victims of Domestic Violence
 - e. Youth

In addition to the main findings presented in the body of this report, Appendix B includes charts illustrating the responses to all survey questions that were part of the 2022 Point-In-Time Count. Appendix A contains information on data collection and methodology.

Definition of Terms

Household - any group of persons who, if they were able to attain permanent housing, would choose to live together; and, shared the same sleeping arrangements on the night of the count.” Three different types of households are discussed below: households with adults and children under 18 (‘families’), households without children (‘individuals’), and households with only children under 18 (‘unaccompanied youth’).

Unsheltered homeless - applies to any individual or family with a primary nighttime residence that is a public or private place not designed for or ordinarily used as a regular sleeping accommodation for human beings, including a car, park, abandoned building, bus or train station, airport, or camping ground.

Emergency Shelter - any facility, the primary purpose of which is to provide a temporary shelter for the homeless in general or for specific populations of the homeless and which does not require occupants to sign leases or occupancy agreements.

Transitional Housing - a project that is designed to provide housing and appropriate supportive services to homeless persons to facilitate movement to independent living within 24 months.

Safe Haven - a form of supportive housing that serves hard-to-reach homeless persons with severe mental illness who come primarily from the streets and have been unable or unwilling to participate in housing or supportive services. Safe Haven programs offer low barriers to program entry and low-demand services and referrals in a 24-hour residential setting to no more than 25 persons.

Tri-County - this term refers to the following Counties – Warren, Hunterdon, and Sussex Counties.

Changes affecting the 2022 Point-in-Time Count

Communities significantly altered their PIT count practices in response to the COVID-19 pandemic. The following safety measures were recommended by the CDC and HUD for all communities’ 2022 PIT procedures:

- decrease face-to-face interactions with clients;
- decrease the number of volunteers who would need to work in physical proximity;
- provide of PPE to all volunteers; and
- design a process that minimizes close contact.

Within New Jersey, the specific methodology implemented for the PIT count is determined on a County-by-County basis within broad parameters defined by HUD. In response to the COVID-19 health pandemic, communities adjusted their PIT count methodology in the following ways:

- Elimination or changes to Project Homeless Connect events
- 7-day outreach and service-based count
- Reduction in use of volunteers to support the unsheltered count
- Increased connection with community-based services providers such as day-centers, soup kitchens and medical facilities to identify and connect with unsheltered persons

The 7-day service-based count targeted feeding programs, drop-in centers and other services for persons experiencing unsheltered homelessness. All persons identified during the 7-day service count were asked about their housing status the night of the count (January 25th). The use of the 7-day service-based count enabled the community to improve their connection to people experiencing unsheltered homelessness, helping to identify people that may have been missed during the “blitz” street count.

The following report only reflects data from the 2022 PIT count due to the significant differences between this count and the 2021 PIT count. In January 2021, vaccines were not widely distributed, communities had restrictions around staff conducting outreach and federal regulations allowed for a 14-day count. These differences have rendered the data non-comparable.

The impact of COVID-19 is seen in the methodology of the PIT count and the community-captured data. As a result of the pandemic, persons experiencing homelessness interacted with the system (outreach teams, emergency shelters, and transitional housing) in ways much different than in the past. Homeless systems also adjusted to the pandemic. This change in interaction varied County-by-County and can be seen in the number of persons identified as experiencing sheltered and unsheltered homelessness.

When reviewing data included in this report, it is important to keep in mind that the Point-in-Time data includes a census of all persons in sheltering programs (emergency shelter, transitional housing, and safe haven programs) as well as the unsheltered population identified on the night of the count. While there is uniformity and complete coverage in data collection for those utilizing the sheltering system within communities, each county develops a local methodology to identify and engage unsheltered persons within the community. As such, the strength of the unsheltered count varies from community to community. In addition, it is generally accepted that while communities work to identify and engage all persons living unsheltered within their geographic region, the count of persons unsheltered in the community may not reflect the full population experiencing homelessness.

II. Racial Disparities in Total Homeless Population

NJ Counts 2022 provides a snapshot of the population experiencing homelessness in the state of New Jersey on a single night. The results of this report are intended to assist communities in understanding the characteristics and needs of those experiencing homelessness to improve service delivery and resource targeting to effectively end homelessness. As communities work to expand their understanding of the root causes of homelessness it is important recognize the structural forces impacting trajectories into and out of homelessness. Disparities in who experiences homelessness highlight the impact of a pervasive structural force: systemic racism. Acknowledging and understanding the impact of systemic racism on those experiencing homelessness is key to developing an effective system responsive to the community and strengthening cultural understanding and awareness.

On January 25, 2022, there were 314 persons counted as experiencing homelessness on a single night in the Tri-County region. Figure R.1 illustrates the racial breakdown of the total population in Tri-County, those living below the poverty line, and those experiencing homelessness.

Fig. R.1: Percent of Population by Race and Ethnicity

In comparing the racial breakdown of those experiencing homelessness to the racial breakdown in the general population and those living in poverty, disparate impacts along racial lines are evident. According to the American Community Survey 2020 annual estimates prepared by the Census Bureau, about 382,800 people live in Tri-County, and 5.15% (19,714 persons) of Tri-County residents are living below the poverty line. There is a strong correlation between poverty and homelessness, however, the racial disparities evident in the counted homeless population indicate that poverty alone does not determine who will experience homelessness. The disparity in representation within the population experiencing homelessness as compared to the population experiencing poverty by race point to poverty being an inconclusive indicator of who will experience homelessness. The chart above highlights that race rather than poverty appears to be a more predictive indicator of who will experience homelessness. Further analysis is necessary to understand the full scope of risk factors and protective factors for communities experiencing

homelessness as they relate to race as an indicator. Within this context it is important to explore the impact of systemic racism on experiences of homelessness, both in terms of who is likely to become homeless, and how systems of care work to end homelessness.

The data from Figure R.1 indicates the following:

- Persons identifying as Black or African American and persons identifying as Hispanic/Latino are overrepresented in the population experiencing homelessness. While 3% of the general population, persons identifying as Black or African American are 7.5% of the population in poverty and 20.4% of the population counted as homeless. While 9.8% of the general population, persons identifying as Hispanic/Latino are 14.7% of the population in poverty and 11% of the population counted as homeless.
- Persons identifying as Black or African American represent 22.5% of the sheltered population (staying in emergency shelter, transitional housing, or safe havens) and 0% of the unsheltered population. Persons identifying as White and not Hispanic or Latino represent 64.8% of the sheltered population and 100% of the counted unsheltered population. Persons identifying as Hispanic/Latino represent 11.3% of the sheltered population and 0% of the unsheltered population.

Figure R.2 illustrates the racial breakdown within each household type for those counted as experiencing homelessness.

- The majority of individual (71%), couple (88%), and family (43%) households were White.
- There were no unaccompanied youth households identified in 2022.

Disparities along racial and ethnic lines in the population experiencing homelessness are seen in a number of other areas including the following:

- 24% of persons identifying as White were homeless for more than 1 year, compared to 21% of persons identifying as Black or African American.

- 38% of persons identifying as Hispanic/Latino and 25% of persons identifying as Black or African were under the age of 18, as compared to 12% of persons identifying as White.
- 38% of persons identifying as Hispanic/Latino reported receiving Medicaid as compared to 58% of persons identifying as White and 44% of persons identifying as Black or African American.
- The most common source of income among persons identifying as Black or African American was General Assistance (23%), whereas the most common source of income among persons identifying as White was no source of income (29%) and persons identifying as Hispanic/Latino was Work Income (46%).
- 70% of persons identifying as White reported a disability as compared to 58% of persons identifying as Black or African American and 31% of persons identifying as Hispanic/Latino.

Figure R.3 illustrates the racial breakdown within each disabling condition reported.

- 28% of persons identifying as Black or African American reported a chronic health condition, as compared to 19% of persons identifying as White and 6% persons identifying as Hispanic/Latino.
- 53% of persons identifying as White reported a mental health issue, as compared to 42% of persons identifying as Black or African American and 22% of persons identifying as Hispanic/Latino.

Disparities emerged in response to a number of other questions included in the PIT survey in addition to the ones reported here. Given this information, it is clear that more research is needed to fully understand the causes, correlations and impacts of racial disparities in who experiences homelessness and how they experience and navigate the systems of service. In addition, this information highlights the need for homeless service systems to make deliberate efforts to understand and address racial disparities in order to better serve those experiencing homelessness and effectively end their homelessness.

III. Findings for Total Homeless Population

Key Findings

- On the night of January 25th, 2022, a total of 240 households, including 314 persons, were experiencing homelessness within the geographic area of the Tri-County CoC, according to the 2022 Point-In-Time Count.
- A total of 49 persons, in 42 households, were identified as chronically homeless.
- 11 persons were identified as unsheltered on the night of the count.
- Data contained within this report was collected from the Homeless Management Information System (HMIS) as well as from client-level interviews entered into SurveyMonkey (SM). About 43% of data collected for this report was generated through HMIS while 57% was generated through client-level interviews from SM.

Total Homeless Population

On the night of January 25, 2022, a total of 314 persons, in 240 households, were experiencing homelessness in Tri-County CoC, according to the 2022 Point-In-Time Count.

Figure 1 shows that, in 2022, 226 homeless persons stayed in emergency shelters, 77 stayed in transitional housing; and 11 were living unsheltered on the night of the count. 72% of the population stayed in emergency shelters on the night of the count while 25% were in transitional housing programs and 4% were identified as unsheltered.

As Figure 2 shows, 27% of the homeless household respondents in Tri-County CoC in 2022 reported that their last permanent address prior to becoming homeless was outside of the Tri-County region.

Homeless Families and Individuals

In this report, 'household' means "any group of persons who, if they were able to attain permanent housing, would choose to live together; and, shared the same sleeping arrangements on the night of the count."

Of the 240 homeless households counted in Tri-County CoC in 2022, 30 (12%) were families with at least one child under the age of 18 and one adult. These families included 94 persons, including 58 children under age 18 and 36 adults. The average family size was 3.13 persons. 211 (88%) of the homeless households in Tri-County CoC were households without children under 18, and they were composed of 220 adults. Most adult only households (129

households, 61%) were staying in an emergency shelter on the night of the count. 72 adult only households (34%) stayed in transitional housing and 10 adult only households (5%) were unsheltered in 2022.

As Figure 3 indicates, there were no unaccompanied youth household identified in 2022.

Demographics

There was a total of 15 (5%) identified homeless adults between 18 and 24 years old, 234 (75%) adults over age 24, and 58 (18%) children under 18 years old experiencing homelessness on the night of the count. Figure 4 shows that the age ranges most represented are Adults between ages 35 and 44 (58 persons, 18%).

44.3% (139) of homeless persons identified were male, 54.8% (172) were female and 1 identified as transgender (0.3%). No homeless persons counted identified as gender non-conforming.

62.1% (195) of persons identified their race as White, non-Hispanic/Latino, making this the largest racial subgroup of homeless persons counted. The next largest group self-identified as Black or African American, non-Hispanic/Latino (20.4%, 64 persons). With regard to ethnicity, 10.2% (32) of persons identified themselves as Hispanic/Latino.

Subpopulations

On the night of January 25, 2022, out of the 314 persons identified as homeless, there were a total of 49 Chronically Homeless persons, representing 15.6% of the counted homeless population. There were 45 homeless veterans representing 18.1% of the counted adult homeless population. 56 Victims of Domestic Violence were identified representing 17.8% of the total counted homeless population. Homeless Youth (individuals and families with heads of households 24 years old or younger) represented 5.4% of the counted homeless population with 17 persons identified. Figure 5 illustrates the break-down of each subpopulation identified by housing type.

As seen in Figure 5, most Chronically Homeless persons, Youths, and Victims of Domestic Violence were in emergency shelter on the night of the count whereas the majority of Veterans were in transitional housing programs.

Disabilities

Figure 6 illustrates that 61% of homeless persons reported having some type of disability. 75.9% of adults 18 or older reported some type of disability compared to 3.4% of children. Figure 7 shows the number of the counted homeless persons that identified as having various disabilities. The most common disabilities included mental health issues and substance abuse disorders.

Among persons identifying a disability, 75% reported mental health issues; this accounts for 45.9% of the total identified population experiencing homelessness. An additional 58.7% of disabled adults reported a substance abuse disorder.

Fig. 6: Percent of Population with a Disability

Fig. 7: Number of Persons by Disability Type

Income and Benefits

Among all households experiencing homelessness on the night of the count, 27.1% had no source of income; 16.1% reported having earned income. The most common sources of income among homeless households were General Assistance (22.5%) and Work Income (16.1%), followed by SSI (14%). Figure 8 shows the income sources reported by respondents in relation to their housing situation on the night of the count.

Figure 9 shows the average monthly income among households in each housing situation.

| Figure 9. Average Monthly Income for Households by Housing Situation | | | |
|--|-------------------|----------------------|-------------|
| | Emergency Shelter | Transitional Housing | Unsheltered |
| Average for All Households | \$ 944.20 | \$ 1,330.61 | \$ 650.50 |
| | | | |
| | | | |
| | | | |

0.4% of counted homeless households reported receiving no non-cash benefit on the night of the count. Medicaid was the top reported non-cash benefit, received by 51.3% of homeless households. Food Stamps (SNAP) was the second most reported non-cash benefit, received by 37.1% of homeless households.

Length of Homelessness

Figure 10 illustrates the total amount of time identified households have reported being homeless. This includes continuous episodes of homelessness as well as the total duration of various episodes of homelessness over the past 3 years.

As seen in Figure 10, 131 identified homeless households (54.6%) reported their total length of homelessness was between 0 and 6 months. Within this group, 27.9% were homeless from 0 – 2 months and 26.7% were homeless between 3 and 6 months. For those with longer periods of homelessness, 23.8% of homeless households reported that their total length of homelessness was more than 1 year. Among households that had lengths of homelessness exceeding one year, 48 households (20%) were homeless between 1 and 3 years, while 9 households (3.8%) reported their total length of homelessness exceeded 3 years.

Episodes of Homelessness

A total of 189 households (78.8%) that reported experiencing one episode of homelessness. Figure 11 illustrates the total number of episodes of homelessness reported by identified households experiencing homelessness.

Cause of Homelessness

When asked to share the primary factor that contributed to, or caused, their homelessness,

more households attributed their homelessness to being asked to leave a shared residence (54 households, 22.9%) than any other cause. As Figure 12 shows, the next most common factor reported was domestic violence (14%), followed by drug or alcohol abuse (12.7%). When households were asked ‘what was your residence prior to your current living situation?’ more said they are living with family and friends (22.5%) than any other type of residence. 18.8% reported residing in emergency shelter and 15% reported residing in permanent housing.

Impact of COVID-19

Over the past two years, systems have transformed to meet the needs of individuals and families experiencing homelessness while also addressing the safety needs of staff and the community at large. The ways in which COVID-19 has impacted individuals and families experiencing homelessness are varied and will likely evolve as we learn more and continue to emerge from the pandemic. To gain an understanding of the impact of COVID-19, the 2022 PIT survey included questions regarding household experiences with COVID-19.

Of the 240 households identified as experiencing homelessness, 192 responded to the following question: “Are you homeless as a result of the COVID-19 pandemic?” Of the 192 respondents, 3% (5 households) indicated their current homeless experience is a direct result of COVID-19. About 40% (2) of households who identified their current episode of homelessness was directly caused by COVID-19 were Chronically Homeless. Another 2 households (40%) identified as Veterans.

All households were asked how the coronavirus impacted their current living situation (regardless of whether they identified COVID-19 as a direct cause of their current homeless situation). Of the 70 that responded, Mental illness/anxiety/fear was the most common impact identified by 37.1% of COVID-19 impacted households. The second most common response was challenges accessing shelter due to limited capacity/access identified by 32.9% of households identifying a COVID-19 impact.

IV. Findings for the Chronically Homeless

Chronically Homeless households, as defined by HUD, are persons with a long-term disabling condition who have been continually homeless for a year or more, or at least four times in the past three years where the length of time in those episodes add up to a year or more. Any family with a head of household that meets this definition is considered a chronically homeless family.

Chronically Homeless households are one of the priority populations identified by HUD. Priority population status reflects the urgency of helping to house those persons who have not been able to remain stably housed over an extended period of time. Chronically Homeless persons are among the most vulnerable homeless groups and effective supportive services and case management may be required in order to help some stay in the housing they need.

16.7% reported 3 or more homeless episodes

Fig. 19: Number of Chronically Homeless Households by Income Source

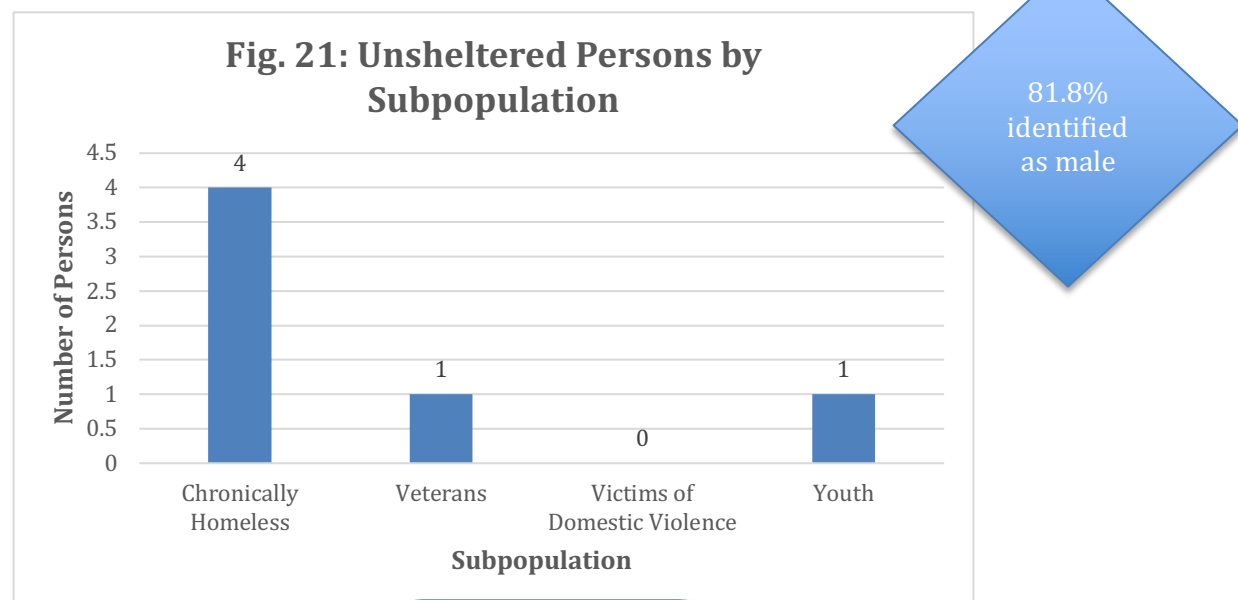

Please note categories are not mutually exclusive; respondents may have selected multiple options

Average Monthly Income is \$527.27

V. Findings for the Unsheltered Homeless

HUD's definition of "unsheltered homeless" applies to any individual or family "with a primary nighttime residence that is a public or private place not designed for or ordinarily used as a regular sleeping accommodation for human beings, including a car, park, abandoned building, bus or train station, airport, or camping ground."

Unsheltered homeless individuals and families are among those with the most critical housing needs in a community. The unsheltered are especially vulnerable in the cold weather and the elements, which are in evidence at the end of January when the Count takes place. The Point-In-Time survey can play an important role in helping communities understand why some of the homeless remain unsheltered, and who is included in this group.

Fig. 22: Number of Unsheltered Persons by Disability Type

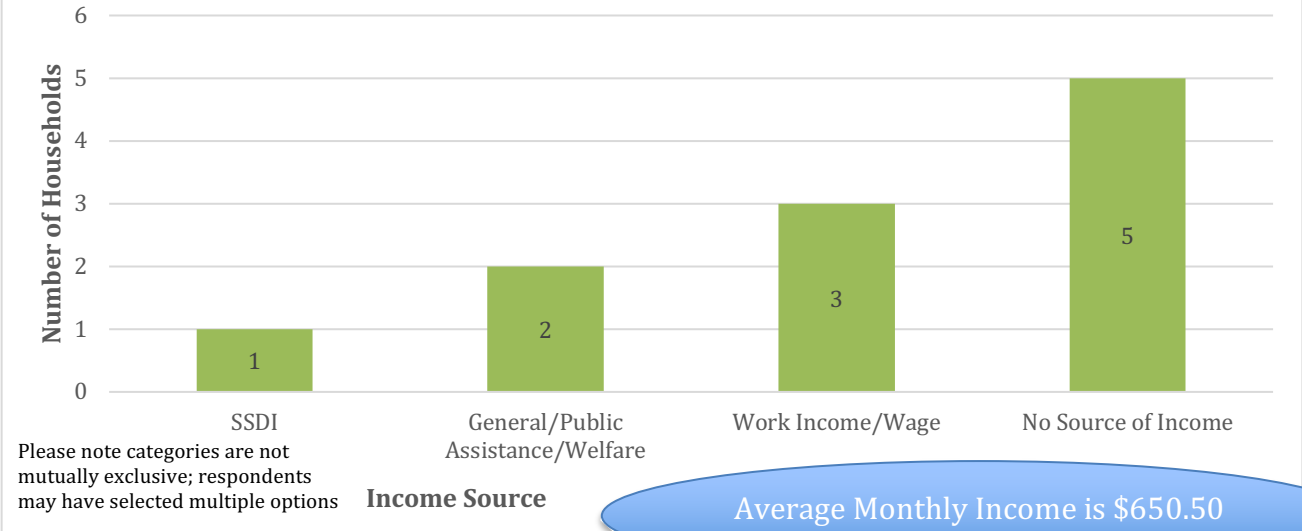

Fig. 23: Income Source of Unsheltered Households by Housing Situation

Average Monthly Income is \$650.50

Fig. 24: Length of Homelessness Among Unsheltered Households

VI. Findings for Homeless Veterans

Veterans are defined as any person at or above the age of 18 who has served in any branch of the Armed Forces. For the purposes of the Point-in-Time Count, the veteran definition covers any person who has served including those who may not be eligible for veteran services through the U.S. Department of Veterans Affairs. In its plan, *Opening Doors: Federal Strategic Plan to Prevent and End Homelessness*, the United States Interagency Council on Homelessness (USICH) has prioritized ending homelessness among veterans. Many communities in New Jersey have also been working hard to end homelessness among our country's servicemen and women.

Fig. 27: Income by Housing Situation for Veteran Households

Average monthly income is \$1,413.93

Fig. 28: Length of Homelessness Among Veteran Households

Fig. 29: Episodes of Homelessness Among Veteran Households

VII. Findings for Homeless Youth

Youth are defined as persons under the age of 25 who are not accompanied by a parent or guardian. This can include individual youth (18-24 years old), unaccompanied minors (17 or younger), households of 2 or more youth presenting together as a household, and pregnant or parenting youth who are the legal guardians of one or more children. The United States Interagency Council has identified homeless youth as one of the priority population of focus in *Opening Doors: Federal Strategic Plan to Prevent and End Homelessness*. Many communities across New Jersey are working to better understand the scope and needs of the Youth population experiencing homelessness and are working with community partners to end youth homelessness.

Fig. 35: Episodes of Homelessness Among Youth Households

VIII. Findings for Victims of Domestic Violence

The 2022 Point In Time Count captured information for individuals and families “Fleeing” Domestic Violence. For the purposes of the Point-In-Time Count, Domestic Violence is defined as any household that is fleeing domestic violence, dating violence, sexual assault, stalking, or other dangerous or life-threatening conditions that relate to violence against the individual or a family member, including a child, that has taken place in their home, or has created a situation in which the individual or family is afraid to return to their home.

IX. Appendix A: Data Collection and Methodology

Requirements for the Count

As part of its Continuum of Care (CoC) application for homelessness funding, HUD requires that jurisdictions across the nation conduct a statistically reliable and unduplicated count of the homeless for one overnight period during the last 10 days of January. New Jersey's Continuums of Care (regional networks of organizations, agencies, and community stakeholders that plan local efforts to help the homeless) conduct an annual count of sheltered homeless persons (i.e. persons in emergency shelter, transitional housing for the homeless, and Safe Haven programs) and at least a biennial count of unsheltered homeless persons.

In their Point-In-Time Count, CoCs must count and report all individuals and families who meet the criteria in paragraph (1)(i) of the homeless definition in 24 CFR 91.5 of HUD's Homeless Definition Rule on the night designated for the count. This includes individuals and families who are:

- **Sheltered**, or “living in a supervised publicly or privately operated shelter designated to provide temporary living arrangement (including congregate shelters, transitional housing, and hotels and motels paid for by charitable organizations or by federal, state, or local government programs for low-income individuals),” or
- **Unsheltered**, “with a primary nighttime residence that is a public or private place not designed for or ordinarily used as a regular sleeping accommodation for human beings, including a car, park, abandoned building, bus or train station, airport, or camping ground.”

Because this report focuses on those respondents who meet HUD's definition of homeless, it does not include information about those who may be at risk of homelessness, precariously housed, or considered homeless under other federal statutes. Persons who, on the night of the count, were living doubled up with another household, living in illegal or overcrowded units, being discharged from a jail or health facility with no subsequent residence, scheduled to be evicted, or paying for their own motel unit were not considered homeless. All survey information collected for respondents who were at risk of homelessness or precariously housed was preserved and shared with each community for local planning purposes, but is not included in this report unless otherwise noted.

Data Collection Methods

Monarch Housing Associates provided each of New Jersey's 21 counties with in-person training, online video and print training guides, a practice online survey tool, and technical assistance to aid in the data collection process for New Jersey's 2022 Point-In-Time Count. Point-In-Time Coordinators in each county disseminated PIT training materials and helped facilitate local planning around implementation of the PIT count in their communities.

The count of homeless persons who were sheltered on the night of the point in time was primarily taken from New Jersey's Homeless Management Information System (HMIS), while the count for the unsheltered and those sheltered by non-HMIS programs was conducted using a Paper Survey tool, personal interviews, and agency client records. This strategy was

designed in accordance with HUD guidance regarding conducting both sheltered and unsheltered Point-In-Time Counts. Due to the COVID-19 health pandemic a 14-day count was utilized so communities could reduce reliance on volunteers and ensure safety protocols were implemented. About 43% of the records for households experiencing homelessness were generated through HMIS.

The 2022 PIT Survey tool closely mirrors information collected in HMIS so that the data was comparable for important factors such as duration and episodes of homelessness, household characteristics, income, services needed, and factors contributing to homelessness. Agencies updated all HMIS data to accurately reflect household information the night of the count, and those with programs that were non HMIS-participating submitted information from interviews utilizing the Paper Survey tool through SurveyMonkey. About 57% of the records for households experiencing homelessness were generated through SurveyMonkey.

Limitations

1. HUD requires a count of sheltered homeless persons and families annually, but only a biennial count of those who are unsheltered. Even though New Jersey conducts both a sheltered and unsheltered count each year, the comprehensiveness of the unsheltered count may be impacted during the non-HUD required full count years. 2022 was a HUD mandated year to conduct an unsheltered count, but due to the COVID-19 health pandemic HUD allowed for communities to waive the requirement of an unsheltered count and focus solely on the sheltered count. Communities that did conduct an unsheltered count recognize that there were limitations due to the COVID-19 pandemic. Factors affecting the unsheltered account include, but are not limited to: lack of volunteers, reliance solely on homeless service provider staff of which many were understaffed, and inability to host in person events or service fairs for persons experiencing homelessness.
2. The information presented in this report is based on survey interviews and agency HMIS records. In some cases, survey respondents did not answer every question completely, and homeless provider agencies did not report all client information on the night of the count. For this reason, all charts presented in this report are based on the responses received, but all percentages are based on the total households or individuals served and thus may not total 100% in each category due to possible missing data.
3. Because the Point-In-Time Count represents only one night during the last ten days of January, it is widely accepted that the PIT will undercount the overall homeless population. Undercounting may occur due to difficulty finding those living on the street, incomplete information for people who do not agree to complete the survey, a shortage of volunteers to cover a geographic area, or homeless persons choosing not to seek housing services on the night of the count. This data should not be viewed as a comprehensive measurement of all families and individuals who experience homelessness throughout the year, but rather as a minimum number of persons who experience homelessness in New Jersey on a given night.

4. The Point in Time Count represents an attempt by communities across the state of New Jersey to capture a complete census of all persons experiencing homelessness both in shelters and on the street during a single night. While the count is coordinated as a single statewide event, each county across the state develops locally appropriate methodologies for conducting the count of unsheltered persons in the community. As such, there is variation of the scope and depth of the unsheltered count from community to community. However, the sheltered count is conducted in a uniform manner across the state and each community maintains a consistent process for completing the sheltered and unsheltered count from year to year.
5. Given the nature of the Point in Time Count as a one-day count of the population experiencing homelessness, data collected on the racial and ethnic breakdown from the PIT is not fully comparable to U.S. Census Bureau data on the racial and ethnic population for the state of New Jersey. While there are limitations on comparing the PIT data, for purposes of examining racial and ethnic disparities, as a result of the single day count, a review of the sheltered population in the State of New Jersey over the course of a full year demonstrates similar trends as seen in the PIT data in which persons identifying as African American or Black, Native American and Hawaiian/Pacific Islander are overrepresented in the population experiencing homelessness.

De-duplication

Monarch Housing Associates collected and merged all HMIS and SurveyMonkey Point-In-Time data from each community into its combined database. Monarch generated two unique identifiers, one more general and one more in-depth, based on the identifying information for each individual record. Using a formula, these unique identifiers were compared to all identifiers for other records in the database to identify potential duplicates.

All duplicates detected through comparison of unique identifiers were then de-duplicated by the following process:

1. Multiple HMIS records where all fields match – a single record was preserved, and all duplicates were removed;
2. Multiple SurveyMonkey records where all fields match – a single record was preserved, and all duplicates were removed;
3. Comparing HMIS to SurveyMonkey records where unique identifiers, disabilities, income sources, household size, and location on the night of the count all match – the HMIS record was preserved and the SurveyMonkey duplicates were removed.

Following this de-duplication of the data, communities were given preliminary data to review all identified duplicates and records with missing data. Communities were then able to update records with missing information and/or request any additional de-duplication they determined prudent. Monarch then updated and removed additional records based on community feedback prior to completing its final analysis and report.

X. Appendix B: Survey Responses

Where did you spend the night of January 25th, 2022?

What was your location the night of the count?

| Fig. A.2: Number of Homeless Persons by Municipality on the Night of the Count | |
|---|--------------------------|
| Location Night of Count – Municipality | Number of Persons |
| Clinton town | 5 |
| Clinton township | 1 |
| East Amwell | 9 |
| Flemington | 58 |
| Frenchtown | 1 |
| Glen Gardner | 36 |
| Lambertville | 5 |
| Lebanon borough | 1 |
| Lebanon township | 14 |
| Raritan | 4 |
| Readington | 24 |
| Andover borough | 1 |
| Andover township | 5 |
| Newton | 46 |
| Vernon | 1 |
| Wantage | 1 |
| Oxford | 10 |
| Phillipsburg | 4 |
| Washington borough | 10 |
| Total | 236* |

*Does not reflect total homeless persons counted as some survey responses may not have included municipality

What is your total length of homelessness?

Fig. A.3: Homeless Households by Length of Homelessness and Housing Type

How many times have you been homeless in the past 3 years?

Who was homeless with you on the night of the Point in Time count?

Fig. A.5: Number of Persons by Age Range and Housing Type

Household Characteristics: Demographic Data – check all that apply to each person

Fig. A.6: Number of Persons by Gender and Housing Type

Fig. A.7: Number of Persons by Race and Housing Type

Household Characteristics: Subpopulations – check all that apply to each person

Please note categories are not mutually exclusive;
respondents may have selected multiple options

Household Characteristics: Disabling Conditions – check all that apply to each person

Please note categories are not mutually exclusive;
respondents may have selected multiple options

Where was your last permanent address before becoming homeless?

| Fig. A.10: Number of Homeless Households by County or State of Last Permanent Address | |
|--|-----------------------------|
| Last Permanent Address - County/State | Number of Households |
| Camden County | 2 |
| Cape May County | 1 |
| Cumberland County | 1 |
| Essex County | 5 |
| Gloucester County | 1 |
| Hudson County | 2 |
| Hunterdon County | 60 |
| Mercer County | 5 |
| Middlesex County | 3 |
| Monmouth County | 3 |
| Morris County | 8 |
| Ocean County | 2 |
| Passaic County | 2 |
| Somerset County | 13 |
| Sussex County | 27 |
| Union County | 2 |
| Warren County | 40 |
| Florida | 2 |
| New York | 2 |
| Pennsylvania | 10 |

What was your residence prior to your current living situation?

What was the primary factor that contributed to, or caused, your current living situation?

Fig. A.12: Number of Households by Cause of Homelessness

Please note categories are not mutually exclusive;
respondents may have selected multiple options

Which of the following sources of income do you, or anyone in your household, receive?

Fig. A.13: Number of Households by Source of Cash Income

Please note categories are not mutually exclusive;
respondents may have selected multiple options

Which of the following sources of non-cash benefits do you, or anyone in your household, receive?

Please note categories are not mutually exclusive;
respondents may have selected multiple options

What is your monthly household income?

Please note categories are not mutually exclusive;
respondents may have selected multiple options

Would you, or anyone in your household, like to receive any of the following services?

Fig. A.16: Number of Homeless Households by Services Needed

Please note categories are not mutually exclusive;
respondents may have selected multiple options

Are you homeless as a result of coronavirus (COVID-19)?

How has the coronavirus impacted you and your current living situation?

Fig. A18: Number of Homeless Households by Impact of COVID-19

Please note categories are not mutually exclusive;
respondents may have selected multiple options
